# 1 INTRODUCTION

## 1.1 Problem Definition

### a. Project Title:

Hotel Management System

### b. Project Definiton:

That system is a hotel management system keeps users records one by one as Receptionist and Guest Info, all booking and check available rooms etc. The system has different categories for guest and receptionist. Guest can booking and cancel booking.Receptionist can booking, cancel booking and control all check-In and check-Out.Hotel System hold all informations in privacy.

### c. Project Goal

The system aims check all informations about guest and make it easy to resarvation for users.Users dont need to go to the hotel or call to make reservation or cancel bookings.

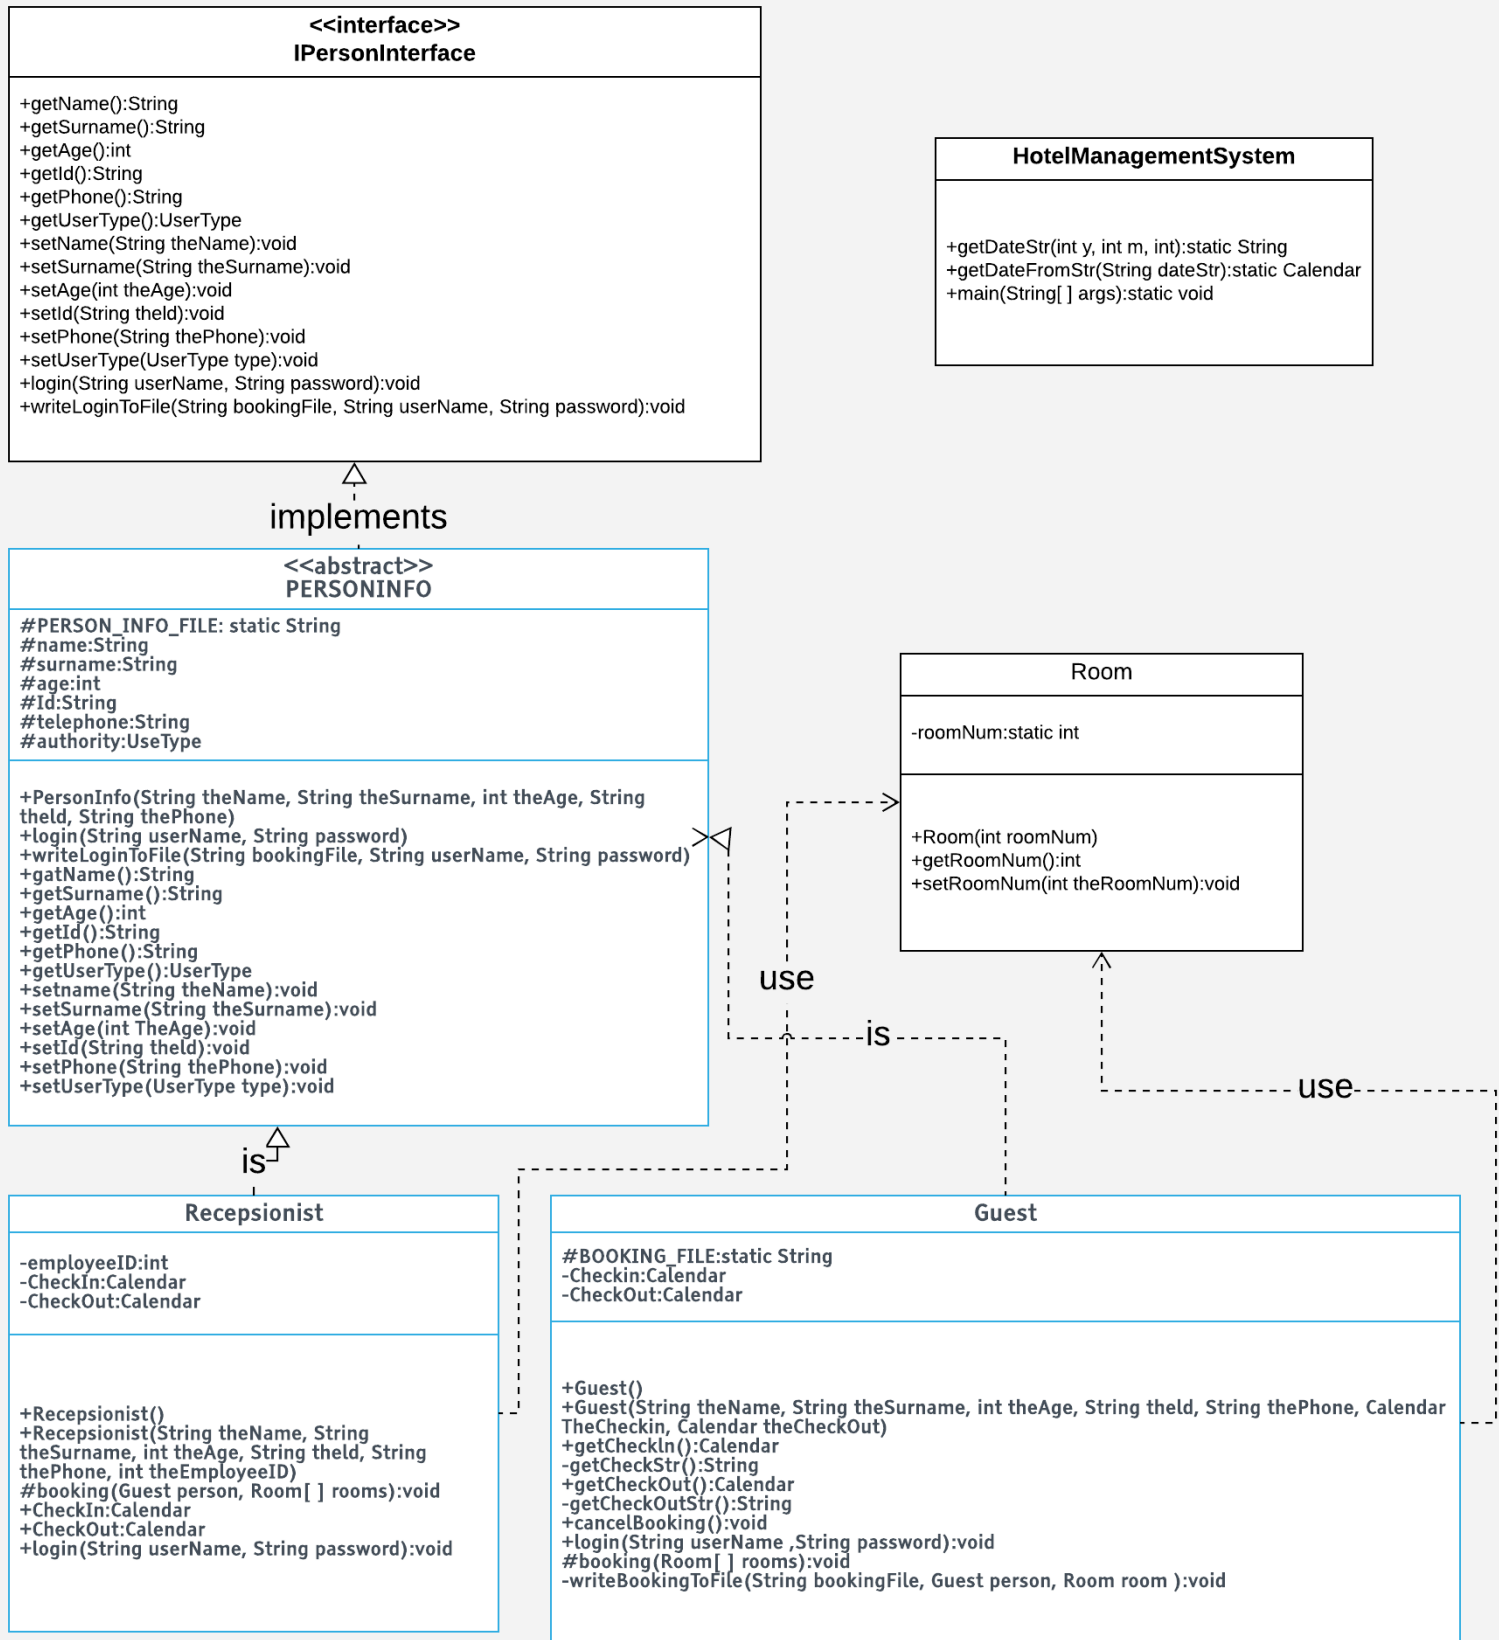

## 1.2 System Requirements

### Functional Requirements

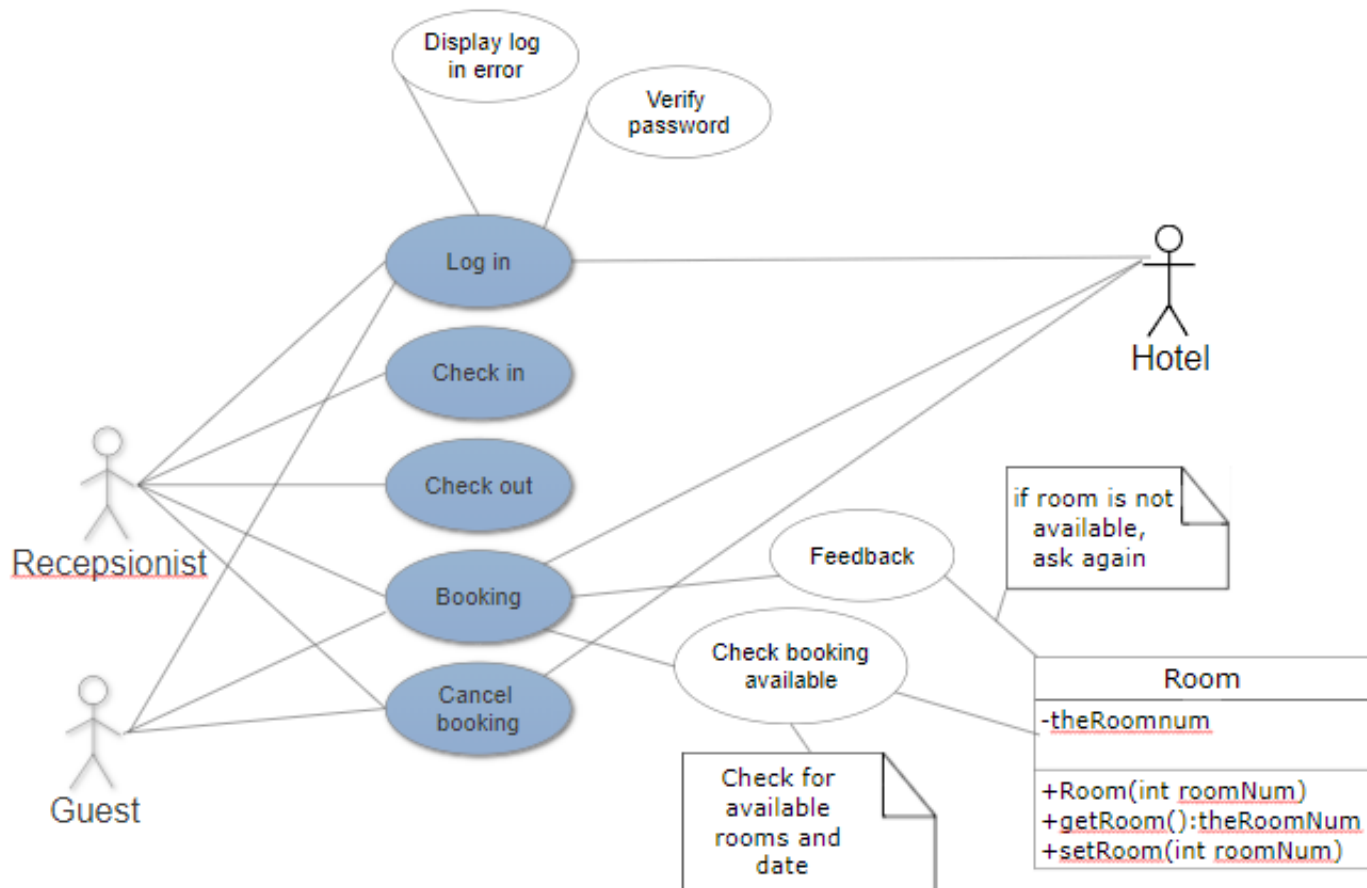

- Includes an basic operations and options for all users.
  - If guest have any problems,can be solved by himself or with recepsinist with easily.
- System have basic menu and can satisfy all request.
- Guests will be able to easily make booking or cancel,if there is a suitable room and available dates.
  - Guests and Receptionist login automatic.There are two different menu for them.
  - Hotel system will control all logins.
  - If Hotel does not have the available room on the requested date or all rooms are full,System will ask again to resarvation for different dates.
  - The receptionist can check-in and check-out differently as the guest

## 2 METHOD

### 2.1 Class Diagrams

## 2.2 Use Case Diagrams

## 2.3 Other Diagrams (optional)

## 2.4 Problem Solution Approach

I considered the problem on two basic components. Firstly I had to separate the users as receptionists and guests. I created two classes named as Receptionist and Guest. And then I created a super class called Person Info.. Because lots of features are same receptionist and guest. I created the interface where all the functions are located for personal info, I created a room class with all rooms and numbers. And finally I created the main window class where all the menus are located and the information is asked and the registration is taken.

## **3 RESULT**

### **3.1 Test Cases**

#### **#TEST CASE 1(Guest booking)**

User: G (Guest)

UserName: emreozgunn

Password: 1123581321

Option: 1)Booking

Name: Emre

Surname: Ozgun

Age: 21

Id: 52017869812

Phone Number: 053851347862

Check-In Day: 10

Check-In Month: 12

Check-In Year: 2017

Check-Out Day: 12

Check-Out Month: 12

Check-Out Year: 2017

#### **#TEST CASE 2 (Receptionist booking)**

User: R (Receptionist)

UserName: eneskaraahan

Password: 11235

Option: 1)Booking

Name: Enes

Surname: Karahn

Age: 21

Id: 52017869872

Phone Number: 053551347262

Check-In Day: 8

Check-In Month: 9

Check-In Year: 2017

Check-Out Day: 13

Check-Out Month: 9

Check-Out Year: 2017

**#TEST CASE 3 (Already booked date and rooms are full)**

User: G (Guest)

UserName: faliturkk

Password: 1593572846

Option: 1)Booking

Name: Furkan

Surname: Turk

Age: 21

Id: 52017869813

Phone Number: 053851227862

Check-In Day: 11

Check-In Month: 12

Check-In Year: 2017

Check-Out Day: 12

Check-Out Month: 12

Check-Out Year: 2017

**#TEST CASE 4(Cancel booking)**

User: G (Guest)

UserName: emreozgunn

Password: 1123581321

Option: 2) Cancel Booking

ID : 52017869812

**#TEST CASE 5(Exit)**

User: R (Receptionist)

UserName: eneskaraahan

Password: 11235

Option: 5)Exit

## 3.2 Running Results

### UNIT TEST SCREENSHOTS

#### #TEST CASE 1 (GUEST CLASS UNIT TESTS)

The screenshot displays the NetBeans IDE 8.2 interface. The 'Test Results' window at the bottom shows the execution of `hotelmanagementsystem.GuestTest`. The results indicate that all 5 tests passed successfully with a 100.00% pass rate. The tests and their durations are:

- testGetCheckOut passed (0.003 s)
- testLogin passed (0.015 s)
- testCancelBooking passed (0.002 s)
- testBooking passed (0.002 s)
- testGetCheckIn passed (0.0 s)

The 'Source' window shows the `GuestTest.java` file with the following code:

```
1  /*  
2  * To change this license header, choose License Headers in Project Properties.  
3  * To change this template file, choose Tools | Templates  
4  * and open the template in the editor.  
5  */  
6  package hotelmanagementsystem;  
7  
8  import java.util.Calendar;  
9  import org.junit.AfterClass;  
10 import org.junit.BeforeClass;  
11 import org.junit.Test;  
12 import static org.junit.Assert.*;
```

The 'Navigator' window on the left shows the project structure, with `GuestTest` selected under the `Test Packages` folder.

#### #TEST CASE 2 (RECEPTIONIST CLASS UNIT TESTS)

The screenshot displays the NetBeans IDE 8.2 interface. The 'Test Results' window at the bottom shows the execution of `hotelmanagementsystem.ReceptionistTest`. The results indicate that all 4 tests passed successfully with a 100.00% pass rate. The tests and their durations are:

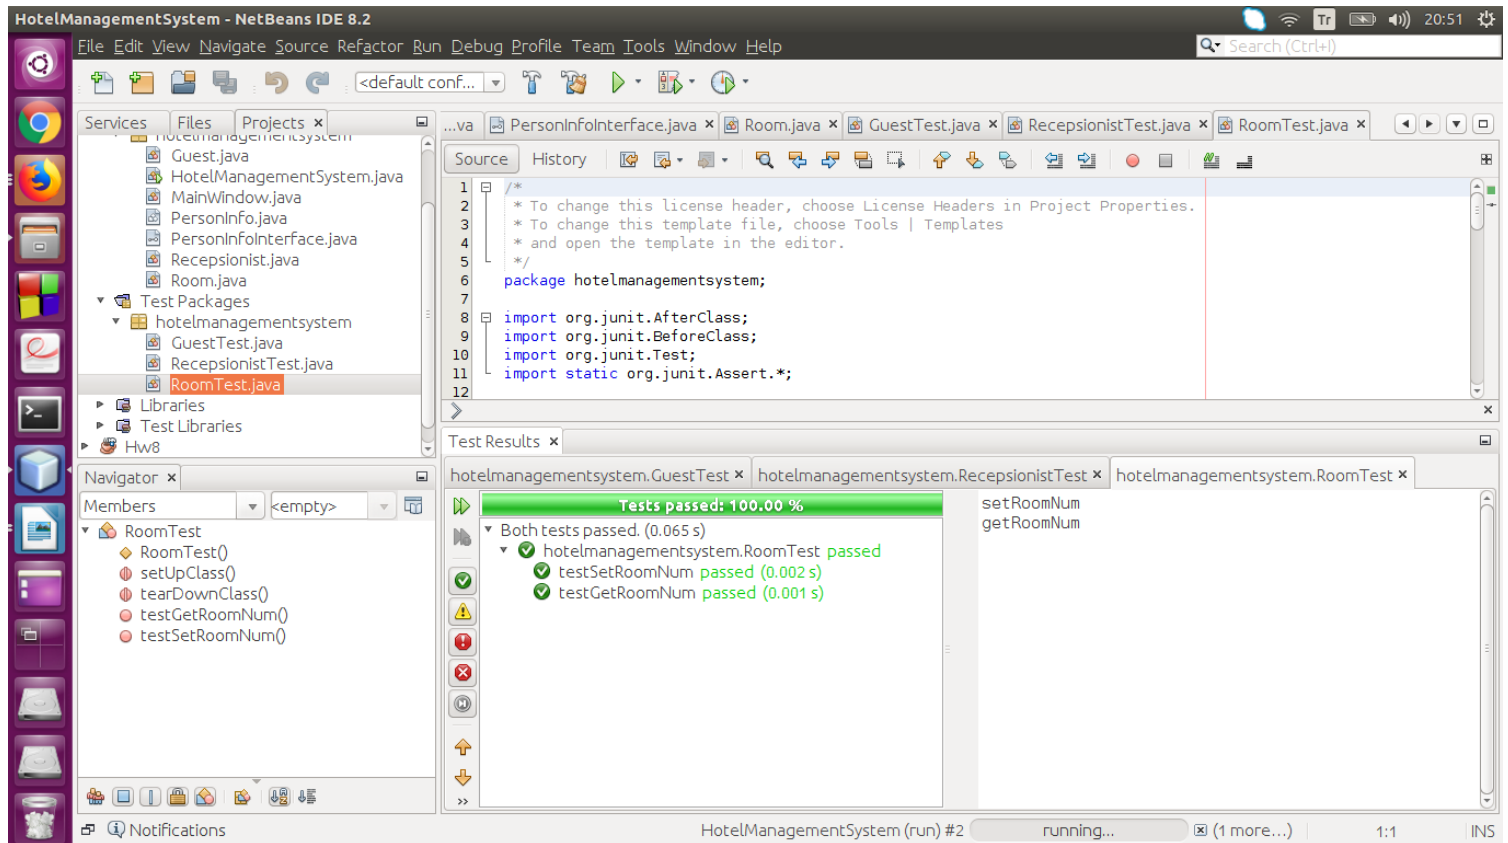

- testCheckOut passed (0.004 s)
- testLogin passed (0.008 s)
- testBooking passed (0.003 s)
- testCheckIn passed (0.001 s)

The 'Source' window shows the `ReceptionistTest.java` file with the following code:

```
1  /*  
2  * To change this license header, choose License Headers in Project Properties.  
3  * To change this template file, choose Tools | Templates  
4  * and open the template in the editor.  
5  */  
6  package hotelmanagementsystem;  
7  
8  import java.util.Calendar;  
9  import org.junit.AfterClass;  
10 import org.junit.BeforeClass;  
11 import org.junit.Test;  
12 import static org.junit.Assert.*;
```

The 'Navigator' window on the left shows the project structure, with `ReceptionistTest` selected under the `Test Packages` folder.

## #TEST CASE 3 (ROOM CLASS UNIT TESTS)

- Main titles -> 16pt , 2 line break
- Subtitles -> 14pt, 1.5 line break
- Paragraph -> 12pt, 1.5 line break
